

Young Mathematicians
Number Path Games

Goal of the game: Be the first to jump your game piece to 10!

Your child is practicing: Recognizing numbers, counting, one-to-one correspondence

Materials:

game board

1 die (from the
number path game)

2 game pieces (any small
objects)

Steps:

1. Put one game piece on each frog.
2. Take turns rolling the die.
3. Say or count the number of dots rolled.
4. Jump your game piece the number of spaces that you rolled. Count the jumps out loud.
5. If you roll a number that makes you jump past the last space (10), go for a swim in the pond!

More ways to play:

- Go backwards! Once you swim in the pond, roll the die and jump back to the frog.

Tips:

- Children need to practice playing board games. This game practices lots of skills. Children will learn to roll a die, move one space at a time on the game board, and count one-by-one.
- Play again and again!
